SUMMARY

Final-year Data Engineering student skilled in designing scalable solutions, optimizing ETL pipelines, and real-time data streaming for impactful analytics. Proficient in cloud platforms(azure), BI, and AI-driven insights, with strong problem-solving and collaboration abilities. Seeking final year internship opportunities where i can apply and improve my skills

EDUCATION

National School of Applied Sciences of AI- Hoceima

2020-Expected Graduation: Jul 2025

State Engineer Degree in Data Engineering.

Faculty of Science and Technics of AI Hoceima

2019-2020

L1 in DEUST Program (Mathematics, Computer Science, Physics.)

SKILLS

- **Programming Languages:** Python, SQL, PL/SQL, Java , Shell/Bash Scripting, R
- **Data Engineering :**ETL, Hadoop, Spark, Kafka, Airflow, Mage.ai, Dbt, Databricks, Selenium,Snowflake
- **DevOps:** Azure cloud , aws(S3,EC2,lambda),GCP(BigQuery,Faas,Cloud Storage), Docker, Git/GitHub(CI/CD)
- **Conception & Modelisation :** Agile / Scrum - UML, Merise
- **DataBases:** SQL(MySQL, SQL Server, OracleDb, PostgreSQL), NoSQL(MongoDB,Neo4j,Cassandra)
- **Business Intelligence :** Power BI, Looker Studio
- **Artificial Intelligence:** Machine Learning / Deep Learning / LLMs
- **Web Development :**Flask , Angular , Spring, Java EE, HTML/CSS/JS

EXPERIENCE

Internship Data Enginner - **Brocolidata** , Casablanca, MA

Jul 2024 - Sep 2024

- Developed a scalable data platform with Docker, Meltano, and dbt, automating ETL on GCP (BigQuery) using Cloud Scheduler and FaaS, while enforcing data governance with data mesh and dbt principles.
- Enhanced data processing efficiency by 30%, streamlining cloud integration and reducing operational costs.

Internship Data Science - **3D SMART FACTORY**, mohammedia,MA

Jul 2024 - Aug 2024

- Built an NLP-based system using Llama 3.1, text similarity, and semantic analysis to match CVs with job descriptions, automating the recruitment process and generating personalized questions.
- Implemented real-time adaptive testing using Kafka and feedback with LangChain, reducing candidate evaluation time by 40% and improving recruitment efficiency.

Internship Machine Learning Engineer , **IT department at ENSAH**

Jun 2023- Aug 2023

- Automated the extraction of research articles from ResearchGate using Selenium, addressing inefficiencies in manual data collection.
- Applied neural networks and unsupervised learning for clustering, improving article categorization accuracy and processing efficiency, utilizing Pandas, NumPy, and Matplotlib for data analysis.

PROJECTS

End-to-End Azure Cloud Migration and CI/CD Pipeline Implementation

- Designed and implemented a data pipeline connecting a local PostgreSQL database to Azure using Azure Data Factory and Databricks, alongside developing interactive Power BI reports and automating deployment with Azure DevOps, significantly enhancing data accessibility and processing efficiency.

Developing Ensah_Aviation: An Open-Source Patent Analysis Tool

- Developed a BI pipeline integrating automated scraping and data ingestion using Spark, optimized workflows with Mage.ai, and created interactive Power BI dashboards leveraging DAX and key KPIs to enhance technological monitoring and research efficiency.

CERTIFICATIONS AND CONTRIBUTIONS

- Contribution to **scientific articles** published in renowned journals, including JICO (International Journal of Informatics and Computing) and Innovation in Research of Informatics.
- Azure Data Engineering (5 Certificates) – Microsoft (via Coursera)
- Supervised and Unsupervised Learning – DeepLearning.AI, Stanford University (via Coursera)
- Big Data Masterclass – Hadoop Ecosystem – Udemy
- Data Engineering/Science/Analysis (12 Certificates) – DataCamp

LANGUAGES

- **English** : Professional Working Proficiency • **French** : Professional Working Proficiency • **Arabic** : Native
